

backupta Identity Resilience Platform

Keep identity dependable across the providers your business runs on

Identity environments change constantly. As they expand across multiple IDPs, tenants, and business units, teams need a consistent way to understand what changed, keep configurations aligned, recover safely, and maintain access when disruption happens. Generic backup tools and IDP-native features treat identity as one more workload, leaving gaps in coverage and slow recovery when something goes wrong.

Backupta is purpose-built for identity resilience. It helps IAM, IT, security, and compliance teams protect, monitor, recover, and execute disaster recovery workflows across the identity providers that run the business.

See every identity change

Gain visibility into all changes across your identity providers, who made them, and when they happened. Get a clear history of identity activity so you can investigate faster without relying on scattered logs, tickets, or manual exports.

Control configuration drift

Keep your identity environment aligned with its expected state. Compare configurations over time, identify unintended drift, and validate changes before they create access, security, or compliance issues.

Recover safely

Restore the specific object, attribute, policy, workflow, automation, or configuration that changed. Recover what is needed with the right dependencies, without broad rollbacks or manual reconstruction.

Execute identity disaster recovery

Maintain a synchronized failover tenant ready to activate during a major outage, cyberattack, or tenant-level disruption. Run failover, failback, and validation with guided procedures and audit-ready reporting.

Trusted by 250+ Organizations from digital native startups to highly regulated enterprises

Backupta provides coverage for:

A unified platform to keep identity dependable for your business

Visibility and operational control

- > **Change visibility:** See what changed across your identity providers, who made the change, and when it happened.
- > **Configuration comparison:** Compare identity states over time to detect drift, validate expected changes, and troubleshoot access or policy issues.
- > **Release management:** Promote approved changes across environments and reduce drift during releases, migrations, policy updates, or tenant changes.
- > **Audit support:** Preserve configuration history, change records, and recovery activity for compliance reviews and internal controls.

Recovery and disaster readiness

- > **Granular recovery:** Restore a specific object, attribute, policy, workflow, automation, or configuration with the dependencies needed for it to work properly.
- > **Synchronized failover tenant:** Maintain a standby tenant ready to activate when the primary identity environment is unavailable, unsafe, or severely misconfigured.
- > **Guided DR runbooks:** Execute failover, fallback, validation, and recovery as step-by-step procedures with progress tracking, operator notes, and timestamps.
- > **Last Mile expertise:** Work with Backupta identity engineers to design, rehearse, and operationalize recovery runbooks for your environment.

Security, compliance, and workflow integration

- > **Customer-controlled storage:** Choose storage and retention options aligned with your security, compliance, and data residency requirements.
- > **Predictable recovery objectives:** Achieve up to 10-minute RPO through incremental backups. Object-level recovery can be completed in minutes.
- > **Compliance Center:** Support evidence collection and reporting for SOC 2, ISO 27001, HIPAA, NIST, and internal control frameworks.
- > **Workflow integrations:** Connect identity resilience workflows with collaboration, ticketing, ITSM, webhook, API, and SIEM tools.

Backupta is redefining identity resilience for organizations where access continuity is business-critical. Trusted by 250+ customers, from digital native companies to highly regulated enterprises, the platform gives IAM and IT teams the visibility, control, recovery, and failover workflows needed to keep identity dependable during change, disruption, or disaster.

« Backupta has been a game-changer. Their solution ensures stability, security, and smooth operations. »

Pluxee
Global IAM Manager

« Backupta provides peace of mind, protecting against catastrophic changes. We see a lot of ROI. »

COSM
Director of Information Security

« Our team effortlessly reverses unwanted changes, restoring peace of mind within seconds. »
